Recommendation letter

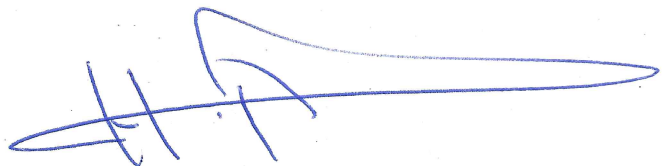

from: Harith Taha Abdulla Aljumaily

I received the PhD degree in Software Engineering from Universidad Carlos III de Madrid in 2006. Since 1999, I have worked with the Advanced Databases Group in the Computer Science Department at Universidad Carlos III of Madrid. Currently I teach Software Testing, Data Structure and Algorithms, Files and Databases Structure, and Advanced Database Design. My research interests include Database Methodologies, Model-Driven Development, Natural Language Processing, and Software Testing. As Andrei's teacher on Algorithms, I would recommend him as a best-practice student who loves to investigate and do things on his own, breaking the common fields and being part of the out-of-the-box mindset.

He always pushes himself to find a better solution instead assume that the right solution is the best for any problem, and think variants although they're not always the best, but making mistakes as a student means you won't repeat 'em as worker, and it's his mainly focus.

As an algorithm student, he did a great job by making algorithms on multiple languages and it's implementation, looking for source codes and investigating a lot.

He scores perfect grades at the moment on Algorithms.

A handwritten signature in blue ink, consisting of a series of loops and a long horizontal stroke.
